1 System Overview

1.1 General Description

MT6628Q is a 4-in-1 wireless communication device which includes

- WLAN
- Bluetooth
- GPS
- FM Receiver

With four advanced radio technologies integrated into one single chip, MT6628Q provides the best and most convenient connectivity solution among the industry. MT6628Q implements advanced and sophisticated Radio Coexistence algorithms and hardware mechanisms. It also supports single antenna sharing among 2.4 GHz antenna for Bluetooth, WLAN and 1.575 GHz for GPS. The enhanced overall quality is achieved for simultaneous voice, data, and audio/video transmission on mobile phones and Media Tablets. The small footprint of WLCSP package with low-power consumption greatly reduces PCB layout resource. The software package “Symphony” enables all advanced wireless features on Android OS.

1.2 Features

- Embedded single core 32-bit RISC CPU for better system level management between sub-systems
- Supports single antenna for Bluetooth and WLAN
- Self calibration
- Single crystal for GPS, BT and WLAN
- Integrated switching regulator enables direct connection to battery
- Best-in-class current consumption performance
- OS support: Android and Windows Mobile
- Intelligent BT/WLAN coexistence scheme that goes beyond PTA signaling (for example, transmit window and duration that take into account of protocol exchange sequence, frequency, etc.)
- Single antenna support for WLAN/Bluetooth/GPS
- WLCSP (3.99x4.45mm^2) package

WLAN

- Single-band (2.4GHz) single stream 802.11 b/g/n MAC/BB/RF
- 802.11 d/h/k compliant
- Security: WFA WPA/WPA2 personal, WPS2.0, WAPI (Hardware)
- QoS: WFA WMM, WMM PS
- Supports 802.11n optional features: STBC, A-MPDU, Blk-Ack, RIFS, MCS Feedback, 20/40MHz coexistence (PCO), unscheduled PSMP
- Supports 802.11w Protected Managed Frames

- Supports WiFi Direct (WFA P-2-P standard) and Wi-Fi Miracast (Wi-Fi Display)
- Supports HotSpot 2.0 Passpoint
- Interface: SDIO 2.0 (4-bit & 1-bit, up to 50MHz), SPI (48Mbps)
- Integrated PA with max 21dBm output power
- Typical -77.5 dBm 2.4GHz receiver sensitivity at 11g 54Mbps mode
- Per packet TX power control

Bluetooth

- Bluetooth specification v2.1+EDR
- Bluetooth specification 3.0+HS compliance
- Bluetooth v4.0 Low Energy (LE)
- Integrated PA with 10dBm (class 1) transmit power and Balun
- Rx sensitivity: GFSK -95dBm, DQPSK -94dBm, 8-DPSK -88dBm
- HCI over high speed (4Mbps) UART(H4), and SDIO 2.0
- Best-in-class BT/Wi-Fi coexistence performance
- Up to 4 piconets simultaneously with background inquiry/page scan
- Supports Scatternet
- Packet loss concealment (PLC) function for better voice quality
- Low-power scan function to reduce the power consumption in scan modes

GPS

- Supports GPS/QZSS/SBAS (WAAS/MSAS/EGNOS/GAGAN)
- Best-in-class sensitivity performance
  - -165 dBm tracking sensitivity
  - -163 dBm hot start sensitivity
  - -148 dBm cold start sensitivity
  - -151 dBm warm start sensitivity
- Full A-GPS capability (E911/SUPL/EPO/HotStill)
- Active interference cancellation for up to 8 in-band tones
- Low-power operational modes for mobile phone and DSC applications
- Supports XTAL
- 5Hz update rate

FM

- 76-108MHz with 50kHz step
- Supports RDS/RBDS
- Digital stereo modulator/demodulator
- Digital audio interface (I2S)
- Fast seek time 30ms/channel
- Stereo noise reduction
- Audio sensitivity 2dBμVemf ((S+N)/N=26dB)
- Audio S/N 60dB
- Anti-jamming
- Integrated short antenna

1.3 Applications

- Smart phone applications
- Media Tablet applications
- Mobile Internet Device (MID) applications
- Portable Navigation Device (PND) applications
- Portable Media Player (PMP) applications
- Portable gaming devices

3 Electrical Characteristics

3.1 PMU Description

The power management unit (PMU) contains Under-Voltage Lockout (UVLO) circuit, Low Dropout Regulators (LDOs), LDO switch (TLDO_SW), buck converter and reference band-gap circuit.

The PMU integrates three LDOs and one buck converter. Those circuits are optimized for the given functions by balancing quiescent current, dropout voltage, line/load regulation, ripple rejection and output noise.

The input voltage of the buck converter ranges from 2.5V to 4.4V. Its output voltage is 1.7V and feeds into the input power of the RF circuit and input power of CLDO (core LDO) which has 1.2V output voltage for all digital circuits.

There is only one PA LDO for WLAN with output voltage of 3.3V. There is also one dedicated LDO which provides 2.85V output voltage for RF blocks, ANTSEL IO power and TCXO via TLDO switch (TLDO_SW).

3.1.1 Under-Voltage Lockout (UVLO)

The UVLO state in the PMU prevents startup if the initial voltage of the main battery is below 2.15V threshold. It ensures that MT6628Q is powered on with the battery in good condition. The UVLO function is performed by a hysteretic comparator which ensures smooth power-on sequence. In addition, when the battery voltage is getting lower, it will enter the UVLO state, and the PMU will be turned off by itself to prevent further discharging.

3.1.2 WF_PA_LDO

WF_PA_LDO converts the battery input to a 3.3V supply for using WiFi RF PA circuits. It is optimized for high-performance and adequate quiescent current.

3.1.3 CLDO

One CLDO is integrated in the PMU to supply digital core. It converts voltage from1.7V input to 1.2V output which suits the digital circuits. The input is typically connected to the buck's output.

3.1.4 Buck Converter

The regulator is a DC-DC step-down converter (buck converter) to source 300mA (max.) with 2.0V to 1.7V programmable output voltage based on the software register setting. It supplies power for the RF

circuitry and CLDO. The buck converter is optimized for high-efficiency, low-EMI, and low quiescent current.

3.1.5 PMU Power Connection

Two power connection methods are suggested. One is for normal mode, and the other is for low-power mode. In the normal mode, the voltage source for RF and digital core LDO is from the DC-DC converter. The voltage source of PA and TCXO/XTAL LDOs is from VBAT directly. The 1.8V or 2.8V IO voltages are from the host side. The connection structure is shown in the figure below.

In the system sleep mode, PA LDO and TCXO/XTAL LDO are turned off. The voltage source of the digital core LDO is switched to IO voltage instead of the DC-DC converter, which is also turned off.

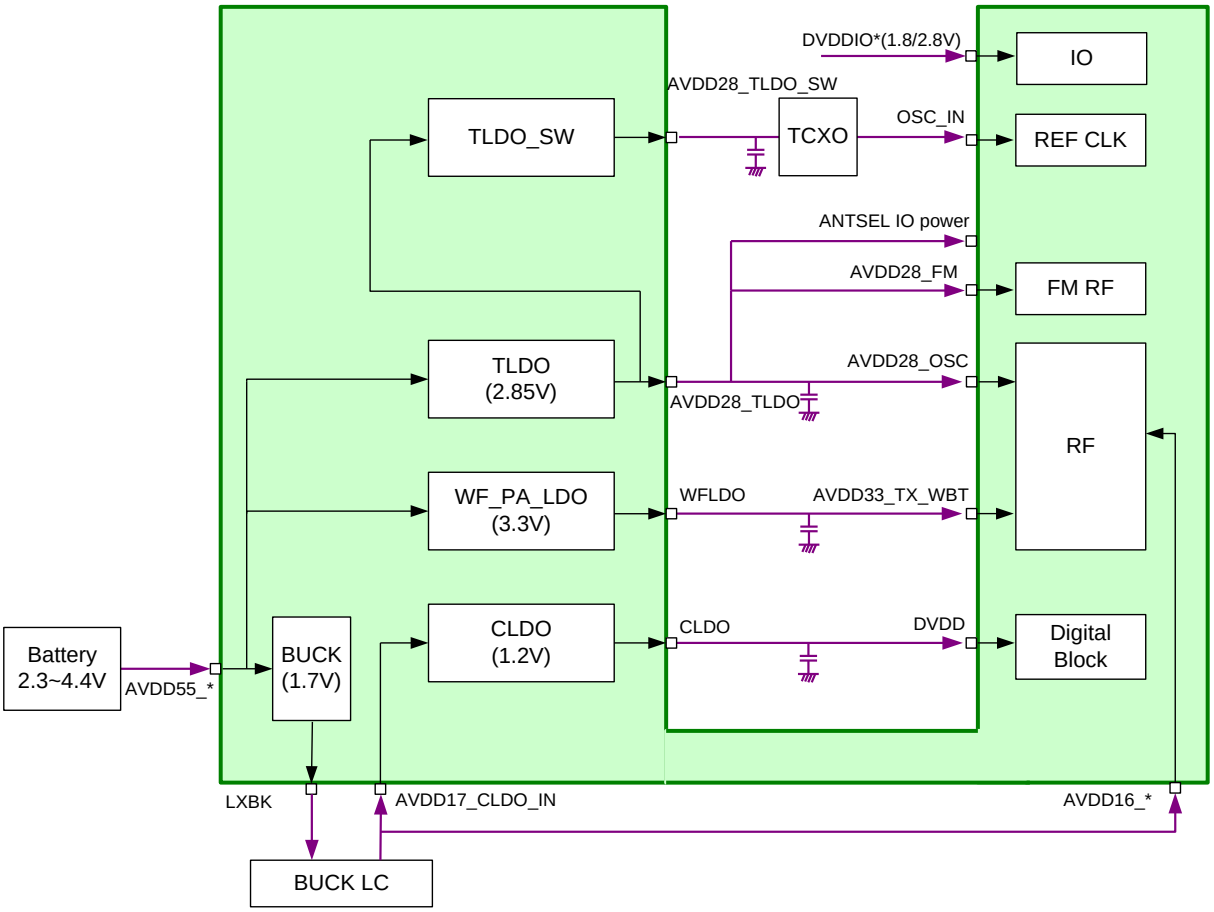

Figure 6. Normal mode power connection

Note that due to legacy naming, AVDD16_* is actually operated in 1.7V.

3.5 XOSC32

3.5.1 Block Description

The low-power 32-kHz crystal oscillator, XOSC32, is designed to work with an external piezoelectric 32.768 kHz crystal and a load composed of two functional capacitors, as shown in the figure below.

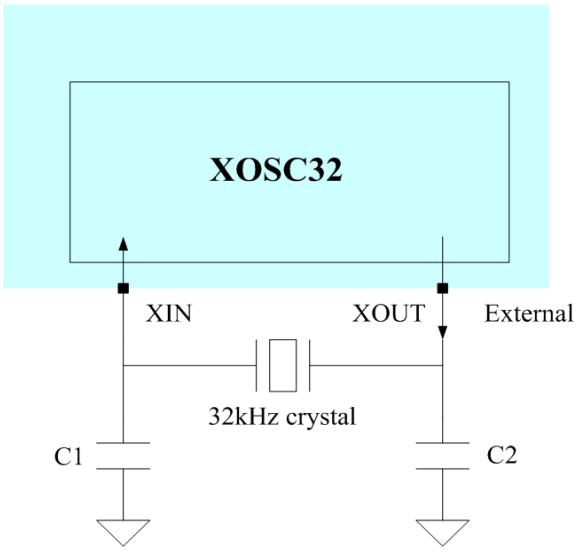

Figure 7. Block diagram of XOSC32

3.5.2 Functional Specifications of XOSC32

Symbol	Parameter	Min.	Typ.	Max.	Unit
VCCRTC	Analog power supply	1	2.8	3	V
Tosc	Start-up time			1	sec
Dcyc	Duty cycle		50		%
	Current consumption		5		μA

ESD CAUTION

MT6628Q is ESD (electrostatic discharge) sensitive device and may be damaged with ESD or spike voltage. Although MT6628Q is with built-in ESD protection circuitry, please handle with care to avoid the permanent malfunction or the performance degradation.

Use of the GPS Data and Services at the User's Own Risk

The GPS data and navigation services providers, system makers and integrated circuit manufactures (“Providers”) hereby disclaim any and all guarantees, representations or warranties with respect to the Global Positioning System (GPS) data or the GPS services provided herein, either expressed or implied, including but not limited to, the effectiveness, completeness, accuracy, fitness for a particular purpose or the reliability of the GPS data or services.

The GPS data and services are not to be used for safety of life applications, or for any other application in which the accuracy or reliability of the GPS data or services could create a situation where personal injury or death may occur.
