# **META v5.3.8.0**

## 超级教程

# Introduction of META

#### **Functions:**

- 1. RF Tool \*\*\*\*
- 2. NVRAM Editor\*\*
- 3. Audio Tool\*
- 4. Baseband Tool\*\*
- 5. MMI data download\*
- 6. Factory Mode:\*\*\*

Perform all function

with Agilent 8960

- 7. IMEI download\*
- 8. Get version\*
- 9. Barcode download\*
- 10. Update parameter\*
- 11. FAT editor \* with Agilent 8960
- 8 IMEI download\*

#### 资源共享

# RF TOO L

#### 1.Power measurement (功率测量)

#### measure the power of indicated channel (测量所指信道的功率)

#### 2.Gain sweep (增益扫描)

#### measure the power of indicated channel by the different gains

### 3.continous RX(连续接收)

### 4. Continue TX

### **5.AFC CONTRO**L

说明:这个测试界面也是要综测仪配合才管用的哦~~ 主要用来测试 26MJ 晶体的**压控曲线** 也可以用来找出 26M 最小的频率误差哦~

在研发方面通过改变 AFCDAC 值的范围和间隔很容易就能找出最小的频率误差 在高级维修方面可以通过是测试值来反映是 CPU 的问题还是 26M 问题还是中频问题 修起 AFC 校准故障料如指掌~~哈哈~~
